A. Tokenize a sentence into words using NLTK

```
import nltk
from nltk.tokenize import word_tokenize

# Download the tokenizer resources
nltk.download('punkt', quiet=True)
nltk.download('punkt_tab', quiet=True)

text = (
    "This is a Demo Text for NLP using NLTK. "
    "Full form of NLTK is Natural Language Toolkit"
)

word_tokens = word_tokenize(text)

print("Original Text:", text)
print("Word Tokens:", word_tokens)
print("Total Tokens:", len(word_tokens))
```

```
Original Text: This is a Demo Text for NLP using NLTK. Full form of NLTK is Natural Language Toolkit
Word Tokens: ['This', 'is', 'a', 'Demo', 'Text', 'for', 'NLP', 'using', 'NLTK', '.', 'Full', 'form', 'of', 'NLTK', 'is', 'N
Total Tokens: 18
```

B. Sentence tokenization with sentence numbers

```
import nltk
from nltk.tokenize import sent_tokenize

nltk.download('punkt', quiet=True)
nltk.download('punkt_tab', quiet=True)

text = input("Enter a paragraph:\n")

sentences = sent_tokenize(text)

if not sentences:
    print("No sentences entered.")
else:
    for i, sentence in enumerate(sentences, start=1):
        print(f"Sentence {i}: {sentence}")
```

```
Enter a paragraph:
Hello there! Welcome to the NLP course. We will learn how machines understand language.
Sentence 1: Hello there!
Sentence 2: Welcome to the NLP course.
Sentence 3: We will learn how machines understand language.
```
