Experiment 9: Simple Chatbot Using If–Else Logic

```
def chatbot():
    print("Chatbot: Hello! I am your simple chatbot.")
    print("Type 'bye' to exit.")

    while True:
        user_input = input("You: ").strip().lower()

        if user_input in ["bye", "exit", "quit"]:
            print("Chatbot: Goodbye! Have a nice day!")
            break

        elif user_input in ["hi", "hello", "hey"]:
            print("Chatbot: Hello! How can I help you?")

        elif "your name" in user_input or user_input == "name":
            print("Chatbot: I am a simple chatbot.")

        elif "how are you" in user_input:
            print("Chatbot: I am doing well. Thank you for asking!")

        elif "your purpose" in user_input or "what can you do" in use
            print("Chatbot: I can respond to greetings and simple que

        elif "thank" in user_input:
            print("Chatbot: You're welcome!")

        elif "time" in user_input:
            print("Chatbot: I cannot tell the current time, but I car

        elif "help" in user_input:
            print("Chatbot: Try saying hello, asking my name, or aski

        else:
            print("Chatbot: Sorry, I didn't understand that.")

chatbot()
```

```
Chatbot: Hello! I am your simple chatbot.
Type 'bye' to exit.
You: Hi
Chatbot: Hello! How can I help you?
You: Name
Chatbot: I am a simple chatbot.
You: How are you!
Chatbot: I am doing well. Thank you for asking!
```

```
You: Bye
Chatbot: Goodbye! Have a nice day!
```
